

What is Sass/Scss

What is Sass/Scss

Sass aka Syntactically Awesome Stylesheets.

is a preprocessor scripting language that is interpreted or compiled into Cascading Style Sheets (CSS). In simpler terms, Sass is a tool that helps make styling and designing websites easier and more efficient.

Sass is a preprocessor:

Meaning it's a step that happens before your CSS is processed. It adds additional features and capabilities that are **NOT** available in regular CSS.

Two syntax

1. SCSS (Sassy CSS)
2. Sass (Indented Syntax)

Nesting

- Create visual Hierarchy i.e, parent child relationship.
